Profile

Cloud Data Engineer with 5+ years building scalable data platforms, experienced in real-time streaming, SAP integrations, and FinOps, with a proven track record improving reliability and reducing cloud costs, working with high-scale data systems on GCP and AWS

Skills

Core: Python, SQL, Spark, Kafka, Airflow, DuckDB

Cloud: GCP (BigQuery, Dataproc, Cloud Storage, Composer), AWS (Redshift, S3, Athena)

Platform & DevOps: Kubernetes, Terraform, Helm, GitHub Actions, CI/CD

Data: Data Warehousing, Streaming, ETL/ELT, Data Governance

Tools: Power BI, Tableau, SSIS, Pentaho

Languages: Portuguese (Native), English (Advanced)

Professional Experience

Grupo SBF — Data Engineer / Data Platform Engineer

Mar 2022 – Present | Porto Alegre, Brazil

- Developed and maintained scalable data pipelines with Python and Spark on top of Google Cloud Platform (GCP) using BigQuery, Cloud Storage, Dataproc, and Kubernetes, supporting real-time and batch data processing
- Designed and orchestrated ETL/ELT workflows using Apache Airflow (on GKE), enabling automated and domain-agnostic data movement across the platform
- Built and deployed ingestion APIs using Apache Kafka and Confluent, including AVRO serialization and full unit/integration test coverage for third-party data ingestion via API
- Automated infrastructure management using Terraform and Helm, with CI/CD pipelines orchestrated through GitHub Actions, ensuring scalable and reproducible deployments
- Improved platform security and compliance by restricting access to production services (e.g., Airflow API), enforcing internal security standards, and tightening firewall rules for GKE and databases
- Led the design and implementation of the SAP ingestion architecture, using AecorSoft for change data capture (CDC) and SAP DataSphere for real-time data streaming
- Drove cost optimization efforts in BigQuery and GCS by managing slot reservations, tracking usage with Cloud Monitoring, applying resource labels, and removing inefficient or redundant workloads
- Worked cross-functionally with analytics engineers, data analysts, and DevOps teams to align solutions with business needs and ensure operational stability
- Contributed to platform observability by maintaining internal documentation, monitoring dashboards, and alerting mechanisms to ensure reliability and scalability

Tech Stack: GCP · BigQuery · Dataproc · Airflow · Kafka · Confluent · Kubernetes · Terraform · GitHub

Actions · Python · SQL · SAP (Aecorsoft, DataSphere) · DuckDB · CI/CD · Data Governance

RCI Analytics Consulting — Data Engineer

Oct 2019 – Mar 2022 | Porto Alegre, Brazil

- Built data pipelines using SSIS, Pentaho, Python, and Tableau Prep
- Integrated diverse sources (REST APIs, FTPs, Oracle, MSSQL, PostgreSQL, Redshift, S3)
- Modeled data warehouses using Star Schema and Snowflake Schema
- Delivered visualizations in Power BI and Tableau, supporting enterprise decision-making
- Clients included retail and logistics leaders such as Usaflex and Indigo

Projects:
Usaflex – Designed a full-stack analytics platform (Data Lake, DW, ODS) using AWS
Indigo – Built scalable DW pipelines with Azure + SSIS + Power BI

Grupo Oleoplan — Data Auditing

Jan 2019 – Oct 2019 | Porto Alegre, Brazil

- Audited fiscal data and product invoicing, ensuring compliance with tax standards
- Built Power BI dashboards to monitor financial performance
- Supported internal IT processes, system checks, and customer data control

Education

Descomplica — B.Sc. Systems Analysis ***Dez/2025***
